

UG – 419

21  
IV Semester B.C.A. Examination, September/October 2022  
(CBCS) (F+R) (2015 – 16 and Onwards)  
COMPUTER SCIENCE  
BCA 405 : Operations Research

Time : 3 Hours

Max. Marks : 100

**Instruction** : Answer **all** the Sections.

SECTION – A

I. Answer **any ten** of the following :

(10×2=20)

- 1) What is Operations Research ?
- 2) Write the standard form of linear programming problem.
- 3) Define slack and surplus variable.
- 4) What are transportation problems ?
- 5) Define basic feasible solution and optimum solution in transportation problems.
- 6) What are the different methods of solving assignment problems ?
- 7) How do you convert maximization problem to minimization for solving assignment problems ?
- 8) Explain Fulkerson's rules.
- 9) Define optimistic time and pessimistic time.
- 10) What are the applications of PERT/CPM ?
- 11) Define saddle point and value of the game.
- 12) What are the different methods available to solve games with mixed strategies ?

SECTION – B

II. Answer **any four** of the following :

(4×10=40)

- 13) a) Explain phases of operations research. 5
- b) A company produces two types of leather belts, type-A and type-B. Profits on two types of belts are Rs. 40 and Rs. 30 respectively per belt. Each belt of type-A requires twice as much time required for a belt of type-B and the company could produce 1000 belts per day. But the supply of leather is sufficient only for 800 belts per day. Belt of type- 'A' requires a fancy buckle and only 400 fancy buckles are available for this, per day. For belt of type-B, only 700 buckles are available per day. Formulate the problem as LPP. 5

P.T.O.

- 14) a) Explain the steps involved in graphical solution to LPP. 5  
 b) Solve the following LPP by graphical method : 5  
 Maximize,  $z = 2x_1 + 3x_2$   
 Subject to  $2x_1 + x_2 \leq 12$   
 $x_1 + 3x_2 \leq 15$   
 $x_1, x_2 \geq 0$ .
- 15) Determine the initial basic feasible solution to the following transportation problem using 4  
 a) North-West Corner Method 4  
 b) Vogel's Approximation Method. 6

		Destination				Supply
		1	2	3	4	
Source	1	21	16	15	3	11
	2	17	18	14	23	13
	3	32	27	18	41	19
Demand		6	10	12	15	

- 16) a) Explain Hungarian method for solving assignment problem. 5  
 b) Find the optimal assignment schedule for given table with cost of each job on each machine. 5

		Machine			
		W	X	Y	Z
Job	A	18	24	28	32
	B	8	13	17	18
	C	10	15	19	22

- 17) The following table gives the list of activities and duration in hours : 10

Job	1-2	1-3	1-4	2-5	3-4	3-7	4-5	4-6	5-6	4-7	6-7
Duration	20	24	8	20	16	24	0	18	0	4	12

- 1) Draw the arrow diagram.
- 2) For each activity calculate early start and early finish time. Latest start and latest finish time.
- 3) Calculate Total Float (TF) and Free Float (FF).

- 18) a) Explain pay off matrix and strategy. 5
- b) Solve the following game. Find the optimal strategy of Player A and Player B. 5

		<b>Player B</b>		
		I	II	III
<b>Player A</b>	I	-3	-2	6
	II	2	0	2
	III	5	-2	-4

SECTION – C

III. Answer **any four** of the following : (4×10=40)

- 19) Solve the following LPP by simplex method : 10

Maximize,  $z = 3x_1 + 2x_2 + 5x_3$   
 Subject to  $x_1 + 4x_2 \leq 420$   
 $3x_1 + 2x_3 \leq 460$   
 $x_1 + 2x_2 + x_3 \leq 430.$

- 20) a) Explain the steps involved in matrix-minima method. 5
- b) Solve the following transportation problem by Least Cost Method. 5

		<b>To</b>				<b>Supply</b>
		10	20	5	7	
		13	9	12	8	
<b>From</b>	4	5	7	9		
	14	7	1	0		
	3	12	5	19		
<b>Demand</b>		60	60	20	10	

- 21) a) Write the difference between transportation problem and assignment problem. 4
- b) Solve the transportation problem using MODI method. 6

		<b>To</b>				
		I	II	III	IV	
<b>From</b>	A	15	10	17	18	2
	B	16	13	12	13	6
	C	12	17	20	11	7
		3	3	4	5	

22) a) Find the optimal assignment for the following problem :

5

	A	B	C	D
W	41	72	39	52
X	22	29	49	65
Y	27	39	60	51
Z	45	50	48	52

b) Write the difference between PERT and CPM.

5

23) a) Explain the different phases of project-scheduling by PERT/CPM.

5

b) Draw the network diagram for the following data :

5

Job	Predecessor
A	–
B	–
C	A
D	A
E	B, C
F	A
G	F
H	D, E
I	G, H
J	G, H
K	G, H
L	J, K, L
M	J, K, L
N	K, J

24) Use the dominance principle to solve the following game.

10

		Player B					
		y <sub>1</sub>	y <sub>2</sub>	y <sub>3</sub>	y <sub>4</sub>	y <sub>5</sub>	
Player A		x <sub>1</sub> A <sub>1</sub>	4	4	2	-4	-6
		x <sub>2</sub> A <sub>2</sub>	8	6	8	-4	0
		x <sub>3</sub> A <sub>3</sub>	10	2	4	10	12
